## General Information

### Short summary

Danish SME is looking for manufacturer of innovative riding breeches. The SME has created waterproof, breathable and stretchy riding breeches, and are looking for a long-term manufacturing partner who can comply with the company's design and use the material the company has chosen.

### Full description

Danish SME has created a design for the world's first waterproof, breathable and stretchy riding breeches that also fits the tall riders. They are looking for a manufacturer who can create these breeches according to the company's design, and using the material the company has chosen.

The riding breeches will be the first product from the Danish SME, who's owner has a background in finance/audit and has been a rider on the Danish national showjumping team for many years.

The SME is looking for a partner who can manufacture the riding breeches in a high quality and according to the desired design (see technical specification). They are looking for a long-term partner with a reasonably fast delivery and wishes to visit the production at some point in the future.

### Advantages and innovations

### Technical specification or expertise sought

The product fabric used for the breeches is from Italy and is a 4 way stretch waterproof material:

- ZENITH V 85 // if more information is needed, the SME can provide that.

Outer layer is a lycra abrasion-resistant, polyamide, elasthan

Membrane 85 (waterproof 10.000 mm / windproof 100 % and breathable 11.000 GR/MQ/24H)

Inner layer: microfiber elastic, polyester/jersey very light and soft

The company wants the breeches with waterproof, durable and strong seams due to the electricity in the breeches and they want them to last a long time. And also with a waterproof zipper.

The breeches comes with extra length and therefore it must be possible for the customers to cut in the leg length (the fabric does not string, so it should be possible).

They need a not too sticky rubber logo on the breeches, one small and two bigger on both knees. The logo must be durable and able to withstand being stretched – due to the stretchy fabric. The logo on the knees will also function as a grip when riding, which is why it needs to be very durable.

The company have a fully developed prototype they can send to a partner.

They have 3 colors at a start: White, black and navy and hopefully they can order 500 pcs. in each color.

### Stage of development

**Available for demonstration**

### IPR Status

**IPR applied but not yet granted**

### Sustainable Development goals

- **Goal 12: Responsible Consumption and Production**
- **Goal 3: Good Health and Well-being**

## Partner Sought

### Expected role of the partner

The Danish SME has big ambitions for their company and therefore they want a long-term partner with a fast delivery, preferably within 8 weeks and a partner they can come visit.

### Type of partnership

### Type and size of the partner

### Supplier agreement

- **Big company**
- **SME 11-49**
- **Other**
- **SME 50 - 249**
- **SME <=10**
