General Information

Short summary

A German company operating a booking platform for musicians is looking for a software company using Ruby on Rails web application framework for improvement of the software of the booking platform

Full description

A German company is operating a booking platform to support musicians experiencing the problems regarding finding a rehearsal space in different cities all around Europe.

Musicians have the opportunity to get a comprehensive information via platform about the offered rehearsal rooms in advance – room size, available instruments, included equipment, possibility of simultaneously usage by number of musicians and feedback from musicians who rented the rooms earlier. Host organisations and also private musicians

are also able to integrate audio samples of the available instruments into their offers.

The platform actually makes previously unused capacities visible. Music schools, whose rooms usually remain unused after 6 p.m. or on weekends, private musicians who do not practice 24/7 in their own rooms, and other offers from these areas expand the entire range of available rehearsal rooms, from which musicians benefit. The platform helps to solve the problem of lack of rehearsal spaces.

Advantages and innovations

• Central platform for musicians and landlords with comprehensive information about rooms, equipment, etc.;
• Easy payment processing, availability calendar and communication tool. Notifications and receipts are sent automatically;
• Previously unused capacities are presented on the platform;
• No long-term agreements are needed;
• Time saving tool for musicians;
• Competition between the rehearsal space provides through bundling the room offer;
• Environmentally sustainable solution - booking, payment proceeding, receipts, etc. – everything is done online.

Technical specification or expertise sought

The software company sought should assist in improving of the software of the booking platform for musicians.
The following services are requested:
- code-audit;
- creating the possibility to sign up with Google and Apple accounts;
- replacement of the current Sharetribe based calendar functionality by customised solution with an option to synchronise the booking calendar with the user´s google-calendar and also some types of the external calendars (MS Office, iCal, etc.);
- adding of download and search functionality on admin panel (regarding users and transactions);
- adding a sort functionality to the report area.
Only the offers on basis of fixed budget in EUR can be considered.
